Lower Extremity Anatomy | Human Anatomy Quiz - Quizizz

In human anatomy, the lower leg is the part of the lower limb that lies between the knee and the ankle. The thigh is between the hip and knee and makes up the rest of the lower limb. The term lower limb or "lower extremity" is commonly used to describe all of the leg. This article generally follows the common usage.

Human leg - Wikipedia

Valves in superficial veins of the lower extremity usually are located near to the termination of major tributaries. Some valves are well developed with marked sinusoid dilation at their base, others are more delicate in their structure. In the GSV there are about six valves, with more valves located below than above the knee.

Anatomy Of The Lower Extremity Veins - Varicose Veins

In the full version of this video, we'll be talking about the main muscles of the lower extremity, otherwise known as the lower limb, as well as some of thei...

Main muscles of the lower extremity (preview) - Human ...

The anatomy of the GSV is shown in Figure 13.3A. The distal GSV is located anterior to the medial malleolus (inner ankle bone), runs up the medial aspect of the calf and thigh, and is joined by a number of superficial tributaries. The GSV drains into the common femoral vein approximately 2.5 cm below the inguinal ligament at the SFJ.

Anatomy of the lower-limb venous system and assessment of ...

The skeleton of the lower limb (or lower extremity) consists of the pelvis and three parts of the free lower extremity - the thigh, leg, and foot. The pelvic skeleton (or pelvic girdle) consists of two hip bones and the sacrum.

Skeleton of lower limb: 3D Anatomy
