A thorough description of the method is given in the two-part paper by [Cundall1988] and , and in the UDEC manual (). PFC is classified as a discrete element code based on the definition in the review by [Cundall1992], since it allows finite displacements and

The wall servo provides the ability to control the translational velocity of select walls using a servo-mechanism in order to apply or maintain a desired force.. The servo-mechanism uses a proportional controller with adaptive gain as follows. Let  $\mathbf{F}^t$  be the target force (input by the user), and  $\mathbf{F}^c$  be
