Operative Techniques In Liver Resection

resection are that the procedure requires the surgeon to be facile with advanced IOUS techniques and unless arterial flow is occluded to the liver, reliable dye staining can be dicult to obtain. The use of indocyanine green (ICG) fluorescent dye during hepatobiliary surgery has emerged over the past few decades and is now widely utilized.

The Utility of Anatomical Liver Resection in ...

In recent years, with the refinement of surgical equipments and techniques in liver resection, blood loss during such procedures has been reduced even without the use of the Pringle manoeuver. 17, 18 Since early 2003, we have adopted the combined use of a cavitron ultrasonic surgical aspirator (CUSA; ValleyLab, Boulder, Co, USA) and a saline-linked radio-frequency dissecting sealer (TissueLink; TissueLink Medical Inc., Dover, DE, USA) to perform liver resection. 19 We found that blood loss ...

Feasibility of liver resection without the use of the ...

What Is the Appropriate Surgical Technique for Anatomical Resection? In surgical cases where tumor location requires either a right or left hemi- or extended hepatectomy or a sectional resection of the liver, the Glissonean pedicle approach is a relatively easy and safe method for accomplishing an anatomical resection due to the anatomical landmarks and extrahepatic location of the pedicles.
